Here's A Secret Weapon That You Can Use To Make YOUR Company Environmentally Friendly AND Reduce Your Workload!!

FINALLY AN ENVIROMENTALLY FRIENDLY SAFETY SOLVENT IS HERE.

You asked for it ... we have it.

RENEGADE Advanced Safety Solvent from Southwest Specialty, Inc. is a new technology drop-in replacement for 1,1,1-Trichloroethane and other dangerous chlorinated solvent degreasers. It offers the same high performance properties to quickly dissolve grease, oil, and grime from metal surfaces, then dries rapidly and residue free. All this cleaning power happens while being **NON-FLAMMABLE** and **NON-CONDUCTIVE** to 26,800 volts. (Wow, that's shocking)

Join us now in our National Rollout of this new Super Cleaning, Super Solvent. Customers like you asked for almost the impossible. We worked and worked until we found a formulation that has the characteristics most asked for, by the "The Powers That Be" upstairs as well the guys in the shop actually using the degreaser.

The most requested characteristics were:

- **Non-flammable...** Nobody wants to set the place on fire.
- **Non-conductive...** Who wants to get jolted?
- **Fast drying...No residue...** Blast grease and grime away
- **Non-chlorinated...** Chlorinated solvents are bad for our groundwater due to run off. Many companies are getting away from them due to clean up cost and heavy fines.
- **Non-ozone depleting...** No CFC's so you won't be increasing the hole in the ozone layer.
